## 14 Factories and Depots locations

To cope with the increasing sales of RSL shuttlecocks each year, we have rapidly expanded from 4 factory locations to a total of 14 locations consisting of Shuttlecock Manufacturing Factories, Feather Processing Factories and Feather Purchasing Depots. This highly efficient network of factories are working closely together to produce enough for our sales of 66 million shuttlecocks a year.

**MASSIVE NETWORK OF FACTORIES**  
**SUPER HIGH TECH FACTORY !!**

### High Tech Factory

We pride ourselves by having a massive network of technologically advanced factories by using automated machines to ensure consistency, quality and efficiency which are extremely important to us.

In line with making satisfactory progress in business, RSL also helps to promote badminton as a sport by sponsoring international tournaments and players particularly by way of special assistance to help those countries which are still in the course of development programmes. All these efforts are made with a view in promoting badminton as a sport. It is believed that the professionalism of our equipment and exposure of our products will enable more badminton supporter to gain access to these benefits.

# Ultimate

Limited Production per year

The Number of Ultimate shuttlecocks produced annually are Limited due to the following factors.

**Carefully Chosen Feather** - Special grade of Goose feather is chosen with cooperation with Goose farms in North Eastern part of China, collected once a year near winter time, where the weather is cold giving the goose the thickest and strongest feathers with unrivaled quality.

**Hand crafted** - Many years ago shuttlecocks were all hand crafted but slowly this trade has been replaced by automation. We want to bring back that RSL tradition of hand craft and mix it with the latest development in shuttlecocks and all our know how in feather to give you the most durable, rock solid flight and accurate speed with the best feel.

Because of this extra processes Ultimate will be sold by Pre-orders only, please contact your local RSL store to order your Ultimate shuttlecocks.

The Danger of Higher and Higher Tension, Lighter and Lighter racket? Vibration. Vibration causes discomfort causes the player to relax his/her grip on therefore causing drop in power and control. Vibro Shaft absorbs the vibration that causes discomfort, therefore improving power and control.

We restudied our Taper Shaft and completely redesigned it to create the OVAL TAPER SHAFT.

- Allowing only one dimensional flex path.
- Faster, more accurate, more control, more power.
- Taper Shaft gives extra flex power.

Weight Positioning System Top Plate, Side Plates, End Plate alters the racket's weight at different positions which changes the balance, power, racket face stability, control and feel of the racket.

A super strong light weight Handle construction with patent inner rib design. (Patent number CN 200620131576.1)

Super low weight series with increased its swing weight making it more powerful.

T-Zone is an additional structural strength reinforcement design around the T-joint, it works to increase the feel, control and accuracy of your every shot. With the added stiffness from T-zone design, it allows you to sense and get more feedback from your every shot, making you more accurate and in control during return shots. Even when in off centre hits, you can feel it and adjust accordingly during impact. The extra torque control will help you better change of direction when playing cross court shots with much more accuracy.

The highest grade of High Modulus Carbon currently available. Super strong. Applied only to shaft which increases its torque rigidity by 21%. Sharper, better control and more solid feel. Strategically placed so will still have maximum flex power and maximum twist reduction together at the same time. Better transfer of power from your hands to the shuttlecock.

-20% Stronger frame. Thanks to Pulse Technology.

- More Powerful Sweet Spot
- Bigger Sweet Spot
- More Feel upon Impact
- Retain Initial Tension Longer
- More Accurate Tension During Stringing

Extendor increases the Impact Zone by 11% both in X axis and Z axis. Improvement on the X axis widens the sweet spot, easier to hit at maximum power. Improvement on the Z axis enhances the string's characteristics, allowing more depth and produce more power with total control.

Shuttlecocks can travel in excess of 300km/hr, imagine the racket speed it needs travel to generate this power? Flow Tech is design to enhance the racket frame to glide through the air as fast as possible. It will also generate a small down force around the frame to act as a natural stabiliser at high speed without adding weight, very much like a spoiler on a sports car.

## What Makes RSL Rackets No.1 in Quality

### High Tech Manufacturing Process

#### Wrinkle Free

- RSL Wrinkle FREE Construction
  - = Less material for Super Strength
  - = Well balanced racket allow the strong material in shaft and handle
  - = Allow Quicker racket movement
- Other Brand Construction WITH Wrinkle
  - = Use more material for strength
  - = Heavy head, bad balance and sluggish play
  - = Heavy head means reducing material in shaft and handle to keep the light weight
- Wrinkles inside the High Modulus Graphite tubing occurs when High Modulus Graphite sheets are BENT into head shape
- Wrinkle causes bobbles which Weakens the construction

RSL with NO wrinkle = Strong and Light Frame

Other Brand with Wrinkle causing bobbles = Weak Frame

### Shaft & Head

- Unique Construction Method - Racket Shaft and Head Frame are constructed separately
- Reason: The Characteristics of Shaft and Head Frame are different = different construction process
- Head Frame - Strong for high tension
- Shaft - Must be Strong = Flexible = Anti Twisting = Powerful
- Gives = Better transfer of Power = Durable = Strong = Flex Power = Anti Twisting
- Ultra Thin 7mm shaft, only with HighTech construction

The New Taper Shaft have a thinning shaft allowing higher Flex Point which results in more flex, more accurate, more power, more deeper smash, more longVing and more feeling.

This is a new technology to combine different layers of Structural Carbon and High Modulus Carbon together. It results in 10% more strength to our high tension frame. This means better power transfer and more accurate during impact.

With the new Super High Modulus Multi - Layered Graphite, it is important to get the ingredient right.

- Too much = Too Brittle.
- Too little = too weak to transfer the power to impact.

With the right amount on RSL shafts it will give Super Durability, Flex Power and Stop Shaft Twisting.

Super High Modulus Multi - Layered Graphite Construction means High Tension Frame When stringing and able to sustain impact in double play.

With the Super High Modulus Multi - layered Graphite Construction, our Shafts can be thinner which means a reduction in weight and increase in flexibility but still with Superior Strength and Durability.

BADMINTON STRING

## NEW XS-2

### Technical Information

- Using high elastic Multifilaments to be the center core, through core treatment process, make the core become stronger and powerful that could help to provide better elastic maintainability. The outer layer is braided with ultra thin micro Monofilament which material could provide huge and excellent elasticity and sounds performance. The final coating is completed with "NANO" elastomer resin coating.

- Sound High Pitch and Loud
- High Tension
- Playability - CONTROL
- Maintainability- Low Tension Loss

# ANGEL WING

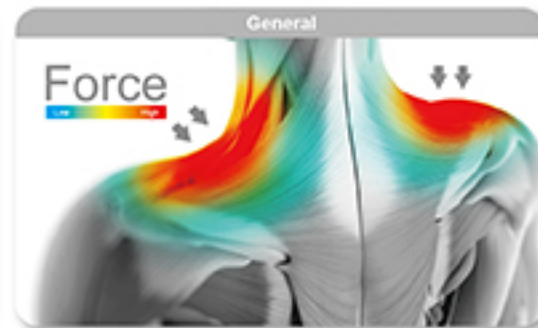

## Backpack Features

- Body Hugging, Multi-fit System
- Better Load Distribution
- Comfort
- Prevent swaying when on the move
- Low and Center Gravity

The "**Angel-Wing**" Straps Design follows the shape of Trapezius Muscles.

The "**Angel-Wing**" carries the Load from the center core and then distributing evenly over the upper, middle and lower Trapezius Muscles.

(Majority Straps design in the market only spread the load over the upper and middle shoulder muscles)

### Multi-fit System

- Fit for different shoulder widths and chest sizes.
- Straps will conform to shape of chest and shape to your back.
- Better fit equals to better weight distribution and comfort.

EXPLORER 3.4

NEW  
**Explorer 3.4**

RB - 930

Colour : Red , Black

Size : 750 X 300 X 260 mm

After Extension : 750 X 300 X 390 mm

- Traditional Tour racket bag with new design features.
- 2 big compartments can carry up to 20 badminton rackets without cover. (Carrying less rackets is recommended for better racket protection)
- 2 main compartments each with the new EXTENDER design. When both EXTENDERS are expanded, the total volume will increase an amazing 50%.(a)
- Shoulder straps + hand held straps combine in one.(b)
- Shoes compartment with external access.(c)
- Total 2 side pockets to better organise all your personal tools and belongings.
- Inner zipper pockets for valuables.(d)
- With the extra design features we managed to make the bag 25% lighter by simplifying the design in other areas.
- Stand along design - The Explorer 3 is designed to stand by itself without falling over. When you are waiting for a friend or travelling home on a bus, Explorer 3 can stand with you without toppling over and without having to bend down to pick it up.

**ORGANIZATION**

## Explorer 1.1

RB - 918

Colour : Blue , Red , Black

Size : 730 X 310 X 190 mm

- Changes are made to give it a fresh new look and with new functionality.
- A fashionable new look .
- Extended bag length.
- Changed backing padding to a softer construction that will still protect the racket but also hugs your back more .
- Continuing the success of the first Explorer 1.1, we are proud to introduce a new concept design stepping away from tradition once again!
- 1 big compartment for big volume storage.
- 1 vertical zipper for easy access to the big main compartment.
- Internal padded compartment can be used for Racket or for Laptop computer.
- Keeping the tradition with the Explorer 1.1, this design completely conceals the racket.
- 2 quick accessible side pockets with 2 extra compartments.
- single zipper front compartment.
- Extra shoulder strap padding for extra comfort.
- Multipurpose and not just for badminton, eg Holiday, hiking, other sports....
- Big Capacity, perfect for badminton tour or holiday trips.
- Rackets are arranged in a flat side formation which reduces displacement giving it lower sideway profile and therefore more manoeuvrable.
- Internal padded computer holder.
- Versatile design, ready for Badminton rackets, Tennis rackets, Squash rackets and any other rackets sports.

### ORGANIZATION

1. Big capacity.
2. Internal padded compartment.
3. Zipper front compartment.
4. Quick accessible side pockets.

## Explorer 2.6

RB - 928

Colour : Orange, Grey, Turquoise, Blue

Size : 610 X 290 X 220 mm

- Super Light, Simple, Practical. Our lightest backpack ever!
- Carry 10 tubes of shuttlecocks plus a racket.
- Folding cover for quick simple access and to save weight.
